Preparation for Calculus

Section P.1 Graphs and Models

- To find the x -intercepts of the graph of an equation, let y be zero and solve the equation for x . To find the y -intercepts of the graph of an equation, let x be zero and solve the equation for y .
- Substitute the x - and y -values of the ordered pair into both equations. If the ordered pair satisfies both equations, then the ordered pair is a point of intersection.
